What is Software?

Software is a program made from a set of commands and codes which operate a computer system and runs by the directives of the codes resulting in the customized output.

Eligibility for CopyRight

Some software may be programmed differently that may produce into unique output for which a programmer may claim ownership right i.e. copyright.

Registration for CopyRight

When the content or result page is dependent on the process of the software, then it cannot be copyrighted as a separate entity and is covered by the software copyright. However, in case, when the result page or output content is independent of the process of the software and the distinction of such separation is clear, the output content can be covered for copyright as an independent entity.

Conclusion

The software that generates different outputs because of their unique and creative style of programming and coding are eligible for copyright. In cases where the output page or content is independent of the software, easily distinguished from such programs can be registered for copyright separately.
